

## CAD ASSIGNMENT 1

**Program 1.write a python program to test the given is prime or not ?**

```
# Program to check if a number is prime or not
```

```
Num1 = int(input("Enter a number :"))
```

```
if num1 > 1:
```

```
    for i in range(2, num1):
```

```
        if (num1 % i) == 0:
```

```
            print(num1, "is not a prime number")
```

```
            break;
```

```
        else:
```

```
            print(num1, "is a prime number")
```

```
            break;
```

**Program 2.write a python program to generate odd numbers from mto n using while loop ?**

```
maxi = int(input(" Enter the Value : "))
```

```
num1 = int(input("Enter a Value: "))  
a=max(num1,maxi)  
print(a)  
b=mini(num1,maxi)  
print(b)  
print("the odd number between",a,"and",b,"is")
```

```
while b<=a:  
    if(b % 2 != 0):  
        print("{0}".format(b))  
    b += 1
```

**Program 3.write a python program to display prime number series upto given number?**

# Python program to display all the prime numbers within an interval

```
low = int(input("Enter a value:"))  
up = int(input("Enter a value:"))  
c=maxi(up,low)  
print(a)  
b=mini(up,low)  
print(b)
```

```
print("Prime numbers between",b, "and",a, "are:")
```

```
for num in range(b, a + 1):
```

```
    # all prime numbers are greater than 1
```

```
    if num1 > 1:
```

```
        for i in range(2, num1):
```

```
            if (num1 % i) == 0:
```

```
                break
```

```
        else:
```

```
            print(num1)
```

**Program 4.write a python program to generate fibonacci series?**

```
num1=int(input("Enter a value:"))
```

```
a=0
```

```
b=1
```

```
print("fibonacci series:",a,b, end=" ")
```

```
for i in range(2,num1):
```

```
    c=a+b
```

```
    a=b
```

```
    b=c
```

```
    print(f3,end=" ")
```

```
print()
```
